User Segmentation & Chosen Segment

🎯 Research Goal: Identify the user segment with the highest opportunity to increase ChatGPT Voice Input adoption on mobile.

User Segments

Segment	% of Respondents
Students	50%
Job Seekers	21.1%
Working Professionals	21.1%
Content Creators	2.6%
Others	5.3%

🎯 Chosen Segment : Students

Why this segment?

✔️ Largest respondent segment (50%).
✔️ Heavy daily ChatGPT users.
✔️ Frequently use ChatGPT for:

- Learning
- Resume Building
- Interview Preparation
- Writing

✔️ Strong opportunity for Voice-based learning and English speaking practice.
✔️ High long-term adoption potential.

⚠️ Hypotheses

⚠️ Students prefer typing because it feels faster.
⚠️ Voice struggles with Indian accents.
⚠️ Users don't feel comfortable speaking in shared spaces.
⚠️ Voice lacks editing before submission.
⚠️ Students don't clearly know when Voice is more useful than typing.

🔍 Research Objective

Understand why students continue to prefer typing over ChatGPT Voice Input despite being aware of the feature.

User Research Findings

Survey Results (n = 38) + User Interviews

63.2%
used voice

57.9%
Molile Users

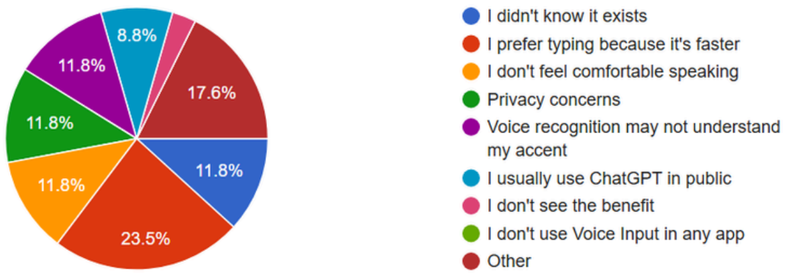

78.9%
Know Mic

78.9%
Home Usage

Have you ever used ChatGPT Voice Input?

Biggest reason for not using Voice

Pain Points

- Prefer typing because it feels faster
- Voice recognition struggles with Indian accents
- Speaking in public reduces comfort
- Users want to edit speech before sending
- Background noise affects usability

💬Representative Quotes

💬 "Typing gives me more control."
💬 "Better understand Indian voice accent."
💬 "Being able to edit the input before it starts processing."
💬 "The ability to interrupt the AI while it is speaking."

Key Insight

Most users already know about ChatGPT Voice and many have tried it, yet they continue to prefer typing because it feels faster, more accurate, and gives them greater control over their interaction.

Problem Framing Canvas

Survey Results (n = 38) + User Interviews

Who?

Primary Persona

🎓 Students (18–24)

Secondary

💼 Job Seekers

Need

- Learn faster
- Practice interviews
- Get instant answers
- Use ChatGPT hands-free while multitasking

Current Behaviour

- Use ChatGPT frequently
- Mostly type prompts
- Have noticed Voice Input
- Use Voice only occasionally

Evidence

- 38 survey responses
- Majority are daily users
- Most users know Voice exists
- Open feedback highlights control and accuracy issues

Root Cause

- Users trust typing more than Voice.
- Voice provides less control.
- Accent recognition reduces confidence.
- Public usage creates hesitation.

Opportunity

User Opportunities

- Improve voice accuracy for Indian accents and real-world environments.
- Give users more control with features like edit before sending.

Business Opportunities

- Increase Voice Input adoption among active mobile users.
- Improve engagement and retention through a more reliable voice experience.

Problem Statement

Students and Job Seekers actively use ChatGPT on mobile but continue to rely on typing because it feels faster, more accurate, and offers greater control than the current Voice experience.
